

Wile Penetrometer

Wile Penetrometer or soil compaction tester is a handy fluid dampened gauge providing a simple solution for measuring soil compaction, as well as the depths at which possible compacted patches are located.

The set includes two replaceable tips for different soil compaction levels:

- the smaller for compacted soil
- the larger for soft soil.

The easy to read dial shows soil compactness in colour sections:

- green: good growing conditions
- yellow: reasonable growing conditions
- red: poor growing conditions.

The dial of the meter has separate scales for each tip.

PRODUCT INFORMATION

Warranty	1 year
